

Do it Yourself - The Bucket Test

Bucket Test Process:

1. Place a five gallon bucket of pool water on the steps of your pool or spa with about 2 to 4 inches of the bucket above water level
2. Mark the water level inside the bucket using electrical tape
3. Mark the pool water level on the outside of the bucket or any convenient reference point on the pool or spa.
4. Compare both levels after 24 hours
5. If the pool has lost more than the bucket, you may have a leak.
